

IPS & DIPS HDPE Pipe Pull Heads 2” to 54” up to 250,000 lbs - Please Call For Quote

Trenchless technology, pipe bursting and sliplining have increased the demand for precision engineered Pull Heads capable of the multiton tensile loads. The cost of a properly engineered, failure resistant pull-head is so small compared to the cost of any on-site difficulties. Our pull-heads are reusable up to 10 times, further reducing each project cost while maintaining reliability on each project. **Durable Pull-Heads** are engineered to handle low pull-loads for Sliplining or insertion projects. **Ruggedized Pull-Heads** are designed to endure longer insertion lengths and or tight clearances. **Reinforced Pull-Heads** are engineered to transfer the pull-force to the circumference of the pipe with a strength equal to the tensile capacity of the pipe itself. **Call or Fax for a “Quick Quote” on specific project needs!** Forged Eye-Bolts usually are required at higher pull-loads.

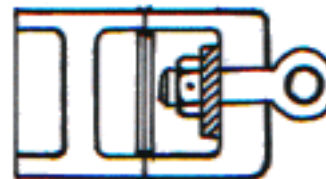

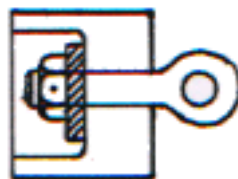

Durable Pull-Head (sliplining and loose insertion)

Ruggedized Pull-Head (Medium pull-loads or longer, tighter insertions)

Reinforced Pull-Head (Very-high pull-loads from Horizontal Directional drilling, Trenchless
***IPPI Stock Pull-Head** Technologies, Pipe-Bursting, Impact Moleing, etc.)

Custom Pull-Heads (Call or Fax with Drawings or Project Requirements to get an Engineering Analysis and a Quick Quote.)
